DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kalisher (5,524,932) in view of Smith (5,178,573).

Kalisher discloses a method of arranging personalized images to a page and fixing them in a book comprising the steps of obtaining information from an individual, feeding the information into a computer, forming visual images on a medium, printing the images and adhesively fixing them to a page.

Regarding the specific arrangement and/or content of indicia (visual images of different characteristics of the same image, the images being a digital image, the characteristics including different sizes and colors, etc.) set forth in the claim(s). It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide any type of indicia having desired characteristics since it would only depend on the intended use of the assembly and the desired information to be displayed. Further, it has been held that when the claimed printed matter is not functionally related to the substrate it will not distinguish the invention from the prior art in terms of patentability. In re Gulack 217 USPQ 401, (CAFC 1983). The fact that the content of the printed matter placed on the substrate may render the device more convenient by providing an

Art Unit: 3722

individual with a specific type of scrapbook does not alter the functional relationship.

Mere support by the substrate for the printed matter is not the kind of functional relationship necessary for patentability. Thus, there is no novel and unobvious functional relationship between the printed matter and the substrate which is required for patentability.

Kalisher discloses the claimed invention except for cutting the images from the medium.

Smith discloses printing a doll and accessory pieces on a planar material, cutting the pieces from the planar material and adhering the pieces to a panel.

Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to modify Kalisher's invention to include the step of cutting the pieces from the medium instead of peeling the pieces from the medium, as taught by Smith, as an alternative method for removing the images from the medium.

Note: Regarding sending the image over a communication channel to a service provider with instructions to the service provider such as through the Internet (claims 20-22), it is notoriously well-known to receive and send images via communication channels such as the Internet for communicating information between different parties at remote locations. Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to modify Kalisher's invention to include sending the images over a communication channel for disseminating and receiving information.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Friend (3,274,706) discloses a book having plastic pages, Engel et al. (4,714,275) disclose a toy sticker collection album, Hefty (5,190,316), (5,454,678) and (5,636,957) disclose a method of making personalized children's storybooks and Boehm (5,947,522) discloses a thematic bound scrapbook.
